THE ULTIMATE VRF SYSTEM

VRF technology is the perfect solution for large commercial and industrial buildings such as offices, hotels, hospitals, leisure, and shops. The variable refrigerant flow technology combined with inverter compressor guarantees high efficiency levels, operational flexibility with limited maintenance requirements. Moreover, the diversity of solutions makes VRF system the most flexible choice to satisfy all requirements.

EXPERIENCE THE FUTURE

The expectations of a modern air conditioning system have evolved over the past years. Today, advanced comfort goes hand in hand with reduced energy and maintenance costs, combined with maximized simplicity and true operational flexibility. SMMS-u associates all of Toshiba innovative spirit and outstanding expertise to create highly efficient solution with maximum end user comfort at its core.

Benefits for consultants

SMMS-u offers unlimited possibilities in terms of capacity, connectivity, indoor unit lineup and control solutions, providing the correct solution for your customers needs. Toshiba's intuitive selection tool will guide you through the selection process with minimal input from your side, ensuring trouble-free installation and operation. All SMMS-u systems come with the Eurovent certification as standard.

Benefits for users

There is nothing like a comfortable place to enjoy the present moment. Full of Toshiba innovations, the new SMMS-u guarantees all year round comfort combined with superior energy management, advanced air filtration and full control solutions for maximized product usability.

Benefits for installers

Designed to perform and engineered to perfection, SMMS-u excels in managing the heating, cooling, hot water and fresh air input into offices, shops, restaurants and domestic housing, with unrivalled connection flexibility. You can rely on Toshiba support, to assist you from the project phase to commissioning and troubleshooting.

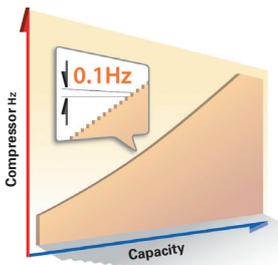

UNIQUE ON THE MARKET: TRIPLE ROTARY COMPRESSOR

The exclusive Toshiba triple rotary compressor brings outstanding performances to the SMMS-u with no compromise on system reliability.

-  Large capacity
-  Wide operating range
-  Less refrigerant needed
-  Low vibration
-  Low noise
-  DLC treatment

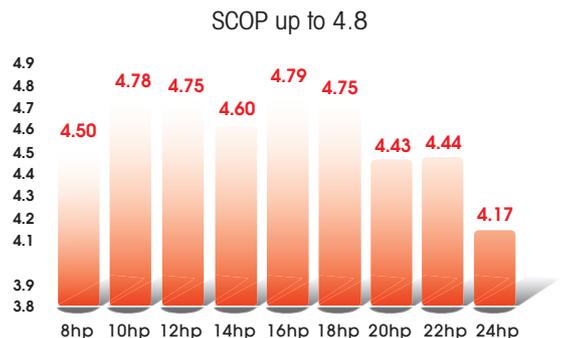

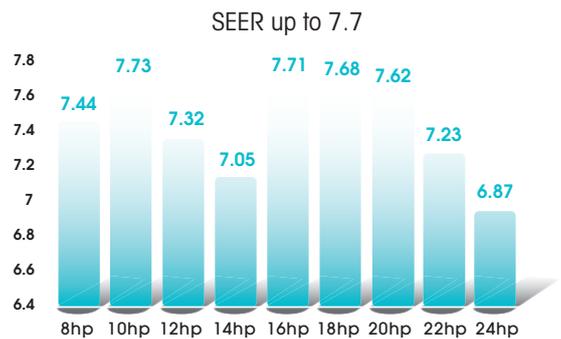

INFINITE VARIABLE CONTROL

This feature has been continually evolved and developed, since its inception by Toshiba engineers back in 2004 with the original SMMS system. The control has the ability to adjust the compressor rotational speed in a near seamless 0.1 Hz steps. This control when matched with Toshiba's newest and latest Twin Rotary compressors, allows the system to respond precisely to the capacity needs of the end user, whilst minimizing energy losses.

TOP CLASS EFFICIENCY

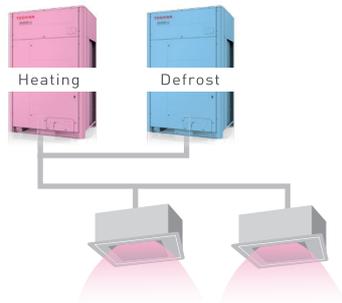

Utilizing the new highly efficient core technologies results in greater energy efficiency and performances.

SUPERIOR AIR COMFORT

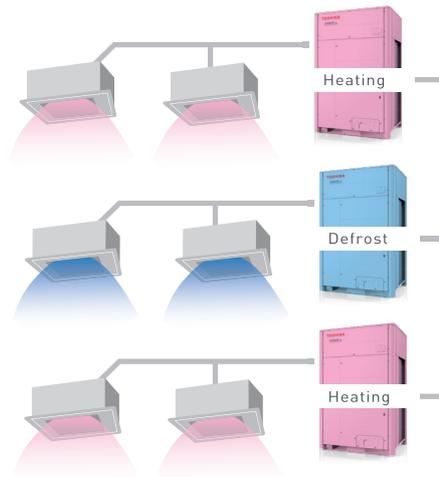

INTELLIGENT DEFROST

Individual defrost: continuous heating up to 5 hours

Kobetsu

No simultaneous defrost in combination configuration. Heating operation never stopped.

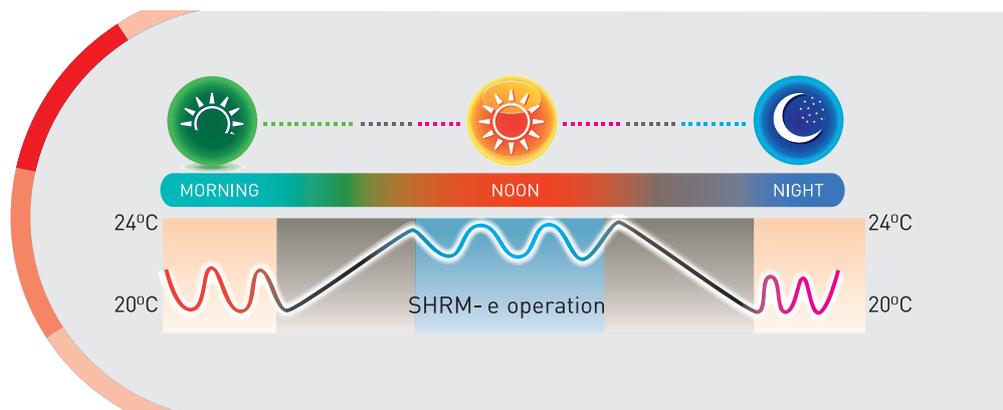

Renkey

No simultaneous defrost with multi system configuration. Heating operation never stopped.

* Applicable on SMMS-u only

DUAL SET POINT FOR MORE PRECISION

The Dual Set Point increases the system's energy efficiency and reduces overall running costs, with longer periods of time in thermal off mode. Heating and cooling temperatures at which the indoor unit will begin to operate can now be individually selected giving maximum flexibility to the user.

COOL COMFORT WITH SOFT COOLING MODE

The development of the soft cooling mode provides a new level for cool comfort. You will have the freedom to personalize the air flow intensity, angle and direction directly from the remote control and enjoy the indoor environment at the right temperature without being directly exposed to the cold draft.

Standard operating mode

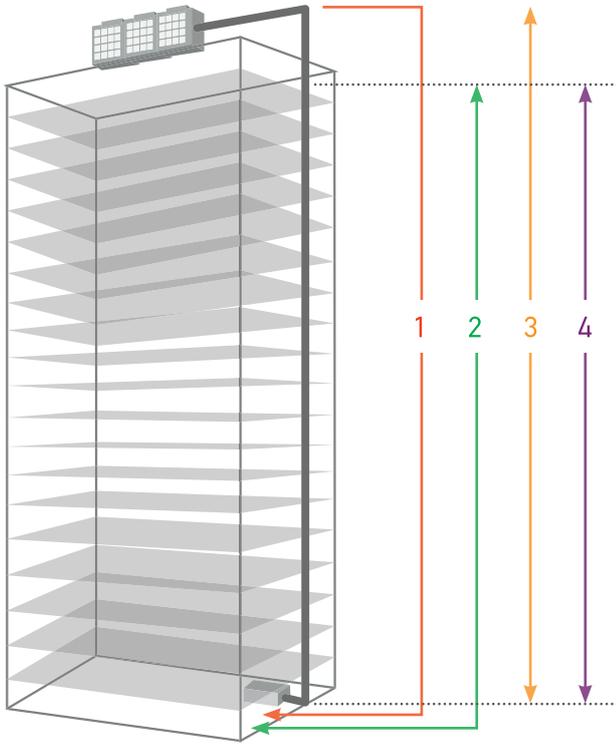

Soft cooling mode

FLEXIBLE DESIGN AND QUICK INSTALLATION

PIPING DESIGN FLEXIBILITY

Toshiba's piping technology makes them one of the industries leaders in system flexibility and ease of installation and with the e-series VRF system, the level of flexibility has increased further, giving more options to the contractor and installer alike.

1. Total piping length

Applied with Toshiba's unique and greatly improved technology, Toshiba's VRF can reach up to 1,200 meters maximum piping length.

Total piping length **1,200 m²**

2. Farthest equivalent length

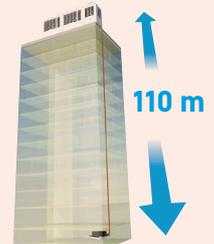

Applied with Toshiba's unique and greatly improved technology, Toshiba's VRF can reach up to 1,200 meters maximum piping length.

Farthest equivalent length **250 m**

3. Height between outdoor unit and indoor unit

Another industry best-in-class feature is the maximum vertical distance between the outdoor and indoor units which can extend up to 110 meters. Toshiba's VRF enhanced piping capabilities results in more benefits for system design and installation flexibility, as well as lower installation costs.

Height difference between outdoor unit and indoor unit **40 m**

4. Height difference FCU-FCU

Maximum vertical distance between indoor units, which reaches up to 40 meters, equal to an entire 11-store building.

TOSHIBA SELECTION TOOL

Designed for novice and expert users, Toshiba selection software creates simple, yet detailed VRF system schematics. It is highly versatile, allowing the level of detail to be tailored to suit customer requirements. Final detailed reports can be produced and sent to customers in PDF format or in more complex files, such as AutoCAD DXF, allowing simple integration into existing software packages.

EASY COMMISSIONING AND MAINTENANCE

Save time during commissioning and maintenance. Choose between the "Wave Tool Advance" using Smartphone NFC connection or the link adaptor connected to the outdoor or indoor unit.

Wireless connection using smartphone* NFC technology to collect system data

Get access to system data indoor using link adaptor

Direct USB connection to get access to system data

System operation self record using link adaptor

* Please contact Toshiba for Android® phone compatibility list.

must be independent from the outdoor unit power supply**

Model/Item	Power Supply	
	Wire Size	
All models of indoor units	2.0 mm ² (AWG#14) Max. 20 m	4.0 mm ² (AWG#12) Max. 50 m

* All wiring must comply with local and national electrical codes, regulations and must be installed by a licensed electrician.

Design of control wiring

Summary of control wiring

Communication wiring and central control wiring use 2-core non-polarity wires.
 Use 2-core shield wires to prevent noise trouble.
 In this case, ends of the communication wire must be grounded.
 Use 2-core non-polarity wire for remote control. (A, B terminals)
 Use 2-core non-polarity wire for wiring of group control. (A, B terminals)

Control wiring between indoor & outdoor units / between outdoor units

1,0mm² to 1,5mm² - up to 1.000m

Central control wiring:

1,0mm² to 1,5mm² up to 1.000m length / 2,0 mm² up to 2.000m length

Remote controller wiring:

0,5mm² to 2,0mm²

- Up to 500m length
- Up to 400m length in case of wireless remote controller in group control
- Up to 200m total length of control wiring between indoor units

* All wiring must comply with local and national electrical codes, regulations and must be installed by a licensed electrician.

Free branching system

- [2] Header branching system
- [3] Header branching system after line branching
- [4] Line branching system after header branching
- [5] Header branching system after header branching

The above five branching systems enable to dramatically increase the flexibility of refrigerant piping design.
